

*Most manufacturers cannot afford a full suite of dedicated **engineering resources**, settling for a combination of internal resources and specialist engineering providers.*

ideas^o
assist program

Although specialist expertise has its place, the lack of a holistic view and information sharing can have a significant impact, leading to costly decisions and missed opportunities.

We offer an alternative solution, through the **ideas* Assist Program**, providing your business with a full range of engineering services specific to the manufacturing industry.

Large enough to provide you with a full range of engineering skills and experience, from drafting to strategic advice. Yet small enough that you get consistent and dedicated access to a senior partner in our firm.

We work closely with your team to uncover valuable opportunities, helping you make more effective capital expenditure decisions for today and tomorrow.

ideas strength is our diversity of experience, developed from working with many of Australia's leading manufacturers over the last 15 years. We maximise value by applying our technical and business expertise to develop innovative process, manufacturing and technology solutions.*

Tailored to your business.

Quite simply, the **ideas* Assist Program** is an outsourced engineering service that can be tailored to your business's size and budget. We aim to create an ongoing relationship, helping you make effective capital investments year after year.

Stepping into your world.

Before we recommend any solutions, we get out of our office and step into your facility. This may range from a day to a week depending on the nature of your business. From talking to staff, to exploring your facility, we take the time to develop a true understanding of your work environment.

Dedicated engineering resource.

Our highly experienced team ensures you get the best of both worlds, a full range of engineering skills and expertise, but a consistent presence. Like bank managers used to be. All client managers are senior partners within the firm and have been with ideas* for an average of 10 years or more.

Effective engineering approach.

Prior to developing a plan, we conduct a Workshop with your business to establish your objectives, identify opportunities and clarify our previous observations. From here, we develop an Engineering & Project Plan that identifies a clear course of action.

Flexible pricing models.

Our working relationship is based on complete transparency and we offer flexible pricing models including retainer, hourly rates or milestone based structures.

Monitoring performance and outcomes.

As part of our offer we help to establish a system for measuring engineering's impact on operations and the ROI of projects.
